Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 11-15 rejected under 35 U.S.C. 102(e) as being anticipated by Ivarie et al (US, 67308822 B1, 2004, filed 10/16/1998).

The instant invention is drawn to a a vector comprising a promoter linked to a heterologous coding sequence to express said coding sequence in tubular gland cells of an avian oviduct.

Art Unit: 1633

Ivarie et al teaches recombinant vectors in avian transgenesis that comprises an ovalbumin promoter controlling expression of a first coding sequence, and an internal ribosome entry site (IRES) element enabling expression of a second coding sequence. The cited art further teaches the presence of selectable neomycin marker gene. In addition the cited art teaches that the invention can be used to express, in large yields and at low cost, a wide range of desired proteins including those used as human and animal pharmaceuticals, diagnostics, and livestock feed additives including genetically engineered antibodies, such as immunotoxins which bind to surface antigens on human tumor cells and destroy them, can also be expressed for use as pharmaceuticals or diagnostics (see Figs 1-3, especially Fig-2, Col. 8-11, Col. 19, lines 24-42). Thus given the broadest reasonable interpretation the cited art clearly anticipate the invention as claimed.

Conclusion

No claims are allowed.
